

## BECO Précision SA

Over the past 20 years BECO Précision SA has grown from a small plastic injection mold manufacturer to one of the largest companies in the industry in Europe. The main factors for this phenomenal growth are the high quality of our products and a great variety of product innovations.

BECO is a manufacturer of top of the line injection molding dies for thermo and duroplast products as well as for MIM and CIM technologies.

Our modern and sophisticated machine equipment consists of HSM (High Speed Milling) 5-axis milling machines, machining centers, sinker or wire EDM (Electrical Discharge Machine) machines, a SARIX machine and other equipment which is needed for the manufacturing of high precision tooling.

## CEBO Injections SA

CEBO's expertise is in high demand in a world where there are growing requirements for high precision and high quality injection molded products not only for the automotive industry, special technical devices, electro-mechanic and medical applications but also for watch manufacturers and the cosmetics industry.

CEBO Injection SA is a full-service partner. Our services include design and manufacturing of molds, product development and design, selection of product material and product manufacturing. Your success is our goal.

We have experience in injection molding of PEEK, PSU, PEI, LCP and many other materials. Our machining equipment includes horizontal, vertical and parting plane molding machines with pressures from 15 to 150 metric tons.

### Automotive Industry

At CEBO, we manufacture highly specialized components and complete assemblies for specific sectors, including meter needles, motor covers, fuel pumps and plastic-coated metal parts.

### Watchmaking

Here we can apply our complete knowledge of manufacturing processes, from the very beginning till the end. Due to the size of the finished product we provide micro parts and delicate high precision milligram components such as cogwheels, rotors, plates, connector boards and gears.

### Electro-mechanical Industry

The bulk of our products are made for the electrical industry. Sophisticated and technically challenging products are made for water meters, gas and electro-mechanical valves, plastic-coated metal components and/or magnets, optical lenses and see-through parts.

### Cosmetics

This industry with its very specific products is focused on technical and aesthetic quality and large volumes in many different colors at very low prices.

### Medical Industry

This is one of our fastest growing markets to which we supply microscopic small products due to our manufacturing know-how.

### Decoration, Painting and Assembly of Parts

We can give your products an attractive new look by using hot stamping, tampon printing technologies or colouring, and through manual or automatic assembly of sub-components or ultrasonic welding processes.
